

Environmental Policy

The Metal Window Company is committed to protecting the environment by demonstrating high standards of environmental responsibility in all of our operations and preventing or mitigating the environmental impacts associated with our activities, products and services.

As stated in our Guiding Principles:

“The company should aim to achieve the highest standards of environmental responsibility regarding everything from its immediate environs to measures to mitigate global warming/climate change. Every Way Forward must include at least one measurable environmental target.”

Our approach is based on:

- Identifying and satisfying compliance obligations and demonstration of best practice.
- Identifying and managing environmental risks and opportunities.
- Understanding and management of direct and indirect environmental impacts associated with our operations, products and services.
- Focusing on pollution prevention, a carbon net zero emissions future, responsible use of resources, waste avoidance; minimising the need for business travel and selecting products and services with reduced environmental impacts.
- Provision of appropriate training and company wide involvement in our zero by 26 programme to help co-owners understand and minimise environmental risks associated with their activities, and to utilise their skills and expertise to achieve transformational change to deliver our net zero target.
- Measuring, monitoring, auditing and targeting improvements in our environmental performance through the zero by 26 programme.
- Engaging and partnering with our supply chain to encourage the measurement of environmental impacts, the setting of targets and to improve performance.
- Working with the Planetmark voluntary initiative to independently verify and report our CO₂e emissions and our alignment with the 2030 global Sustainable Development Goals.
- Implementing, maintaining and communicating this policy across the company and making it available to all interested parties; and
- Providing regular updates on our zero by 26 progress and plans.
