

NEO ADVANCE ROOFLIGHT

Neo Advance is our range of highly energy-efficient, contemporary rooflights for flat roofs. With our patented Thermal Barrier combined with the Lining to Glass aesthetic, you are guaranteed uninterrupted sky views through the rooflight. Neo Advance is the perfect choice for any contemporary renovation or new building project. Neo Advance is available in a wide range of standard sizes or sized to fit through our Bespoke Design Service.

Neo Advance enables our customers to transform properties with natural lighting from above that not only serves their practical needs but enhances the design and beauty of the building.

Employee owned and a certified B-Corp organisation, we are committed to improving the standards of our products for our people and the local community and to reducing our impact on the environment.

We are The Rooflight Co. The premium rooflight manufacturer for properties of architectural significance.

DESIGNED FROM A THERMAL PERSPECTIVE:

The design of the Neo Advance Rooflight maximises the thermal performance of the insulated-glazing unit. With our patented frame design and Thermal Barrier technology we've engineered a glazed flat rooflight that delivers performance values well in advance of current Building Regulation requirements. This complementary flat roof collection to our popular Neo Rooflight has been born out of our obsession to detail and desire to push engineering boundaries. Each Neo Advance Rooflight benefits from:

- o **Thermal Barrier technology** – improving both thermal performance and increasing end of life recyclability, the Thermal Barrier creates a thermal separation between the aluminium rooflight frame and the interior environment. By approaching thermal transmittance in this innovative, patented way, our Design Engineers balance both sides of the sustainability issue (performance in use versus recyclability at end of life).
- o **Lining to Glass aesthetic** – Neo Advance rooflights maximise your view of the sky above through our innovative Lining to Glass aesthetic. The frame of the rooflight integrates the internal reveal, so when viewed from beneath, it appears totally frameless.
- o **Low profile design** – Flushness to the roof plane is a detail so often overlooked with flat roofs, at Rooflight Co we believe that all rooflights should appear as flush as possible. With Neo Advance we further enhance this aesthetic detailing by introducing our signature double split line further reducing the perception of height.

We are passionate about Rooflights. For us, it's the small and often overlooked details that make Neo Advance the energy efficient choice for properties of architectural significance.
